

**TOPIC**

Thermodynamics – Section XII – Question 4

**QUESTION**

Air in a closed-rigid vessel at 2 bars and  $25^{\circ}\text{C}$  is heated until its temperature is  $100^{\circ}\text{C}$ . The final pressure in bars most nearly is

- (A) 2.50
- (B) 4.40
- (C) 8.00
- (D) 256.0

**HINTS**

- Closed means constant mass of air
- Rigid means constant volume
- Constant mass and constant volume mean constant specific volume
- Use absolute temperature
